

Reef Roids 2 oz (30g)

Availability: 6

Weight: 8.00oz

Dimensions: 2.00in x 2.00in x 2.00in

Price: \$17.00

Ex Tax: \$17.00

Short Description

The particle size of Reef-roids is around 150-200 microns. This is an ideal size for Goniopora and other filter feeding corals to feed on..

Description

The particle size of Reef-roids is around 150-200 microns. This is an ideal size for Goniopora and other filter feeding corals to feed on. When using Reef-roids, you will notice excellent polyp extension on all filter feeding corals. Zoanthids, Mushrooms and Ricordia will demonstrate a distinct feeding response. And with continued use, your filter feeding corals will experience faster growth and better colors.

Reef-roids mixes remarkably well into water and does not float to the surface like most dry coral foods. This ensures a long duration in your water column to minimize food waste.
